Dry skin, or xerosis, is a skin type usually marked by firm texture and parched skin. This type is especially noticeable during winter, when one turns to indoor heaters due to the cold weather and dry air or low humidity. Signs of dry skin usually appear as pink spots on the face, arms and legs. These small spots can grow into painful patches that later flake and become itchy if left untreated. The shin and the abdomen, particularly the sides, are also frequent dry spots. Eczema and other types of dermatitis could also emerge without the appropriate treatment. The condition may also be genetically inherited.

The normal skin changes accompanying aging also tend to

make elderly people have dry skin problems. The major parts of the immune system are the thymus, spleen, lymph system, bone marrow, white blood cells, antibodies, complement system, and hormones. - Body Wraps Body wraps, both professional and homemade can improve the appearance of cellulite. Body wraps use a combination of minerals and herbs that stimulate the fat cells to release their contents, they absorb toxins from the skin and reduce swelling. Generally you will find stimulant herbs like kelp or algae that stimulate the fat burning process in the cells. You will find cosmetic clays that will remove toxins and wastes from flavoxate in Australia pores, and horsetail and horse chestnut that reduce edema swelling and provide minerals for strengthening the skin.

These formulas are applied to the skin with the use of compression wraps. For recipes for doing home wraps, go to the Botanical Beauty Lab website.
