Manifest

der

Kommunistischen Partei.

Veröffentlicht im Februar 1848.

Proletarier aller Länder vereinigt euch.

London.

Gebruckt in der Office der „Bildungs-Gesellschaft für Arbeiter“
von J. C. Guehard,
46, Levee des Sautes, Basse-Seine.

Manifesto Comunista

Escrito por *Karl Marx e Friedrich Engels*

COMUNISTAS
Manifesto

Este documento é uma reprodução fiel do original em português publicado em 1848. O texto original está disponível em: www.marxists.org/portuguese/manifesto.htm. A tradução para o português foi feita por [nome não identificado].

No manifesto do partido comunista em 1848 marx e engels.

The e-commerce is a strange animal. On the one hand, it seems that it is the new arrival of block one that revolutionises the way commercial transactions are done online. On the other hand, its business model often looks identical to the physical retail that has existed for centuries. The truth is that both points of view are valid. E-commerce does more or less the same for retail sale. However, the fact that it operates in digital, introduces some unique business elements. This is how e-commerce works. This goes to the heart of trade. There must be an exchange of values. If one of the parties to the transaction pays money, the other should provide a product or service in return. We have reached a point where almost all the goods sold in the physical shops also sell on e-commerce websites: gadgets, books, cars, groceries, toys and clothing among others. The e-commerce era has also made it easy to sell new categories of products. An example could be digital goods such as music, ebook, software and the like. In addition, e-commerce facilitates transactions on a wide range of products, such as airline tickets and magazine subscriptions. When the customer has browsed through your e-commerce site and decided that he would like to buy, there must be a process that accepts their order. The software that runs this process is called a shopping cart. In addition to recording what is purchased and updating the order database, the trolley carries out several other tasks: calculation of taxes and other charges, processing of coupons and other discounts, acquisition of the billing address and delivery of the customer upselling to the customer, guarantee of acceptance by the user of the terms of sale, creation of codes such as invoice numbers, order number, tracking number and presentation to customers of the delivery and the addition of the corresponding commission forwarding customers to the payment gateway (in the case of downloadable digital goods) downloadable customers paid to the download page. There are some e-commerce websites, especially in business-to-business space that could provide credit for purchases. In most cases, an e-commerce transaction involves money transactions. This process is led by a software called payment gateway. The payment gateway offers customers payment options, accepts identifying data, such as credit card numbers, and authenticates customers using a password, a CVV code or more authentication factors. We agree with those who say that effective logistics is the key to a successful business of e-commerce. One of the most disappointing features of online purchasing is the indefinite and disproportionate delay in receiving the goods. As a result, e-commerce companies must ensure that the right product is delivered to the customer, in good conditions and in due time by the customer. Since logistics is a specialized function, several e-commerce companies outsource to third party logistics suppliers. Customers must be assisted pre-sale and post-sale. Before the sale, customers may have questions about the characteristics of the product that are not mentioned on the site. They may have questions about customization and accessories. After the sale, customers may have questions about the use, repair or improvement of the products or services they have already purchased. There is no flawless product. As a result, some products will be damaged or stop working properly. Sometimes the wrong product will be delivered. Such errors or damage trigger the reverse logistical process. In the usual way, goods pass from e-commerce to the customer. In reverse logistics, the flow is in the opposite direction. An e-commerce trade has many parts in motion. To be successful, it is necessary for you to each of them skillfully. RESPONSE Electronic cigarettes, or e-cigarettes, put nicotine in the lungs and And they do it without smoke and tar from a normal cigarette. But other harmful things can enter your body when you vacuum. It is particularly true when aromatized cigarettes are used.
